

## Directions North America 2018 Android Mobile App Sideload Instructions

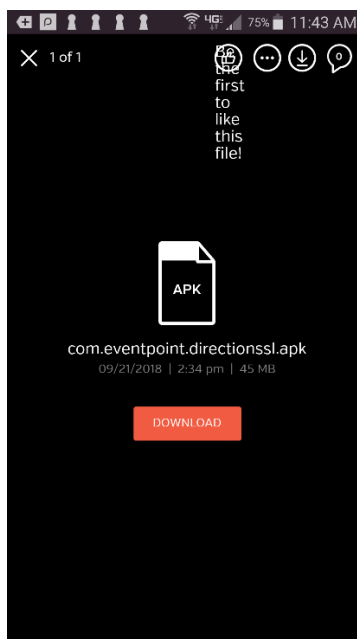

The instructions below detail the process for downloading and installing the Android mobile app via sideload, which is a method of installing an app separate from the Google Play store. You should only sideload this app if you cannot upgrade your device to Android version 8.0—if you can, then please download the app from the store [here](#).

*Please note: you must have at least Android version 6.0 on your device to successfully sideload this app.*

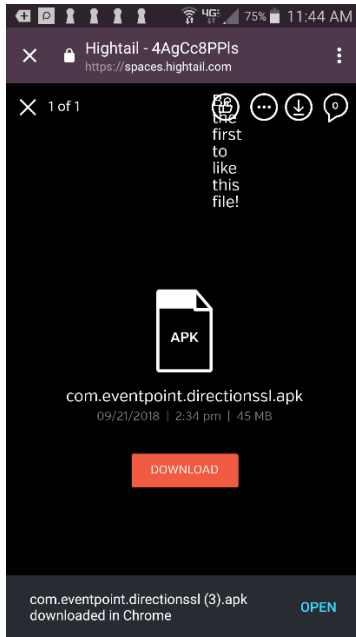

1. Click [here](#) to access the file to download
2. Select the “APK” icon

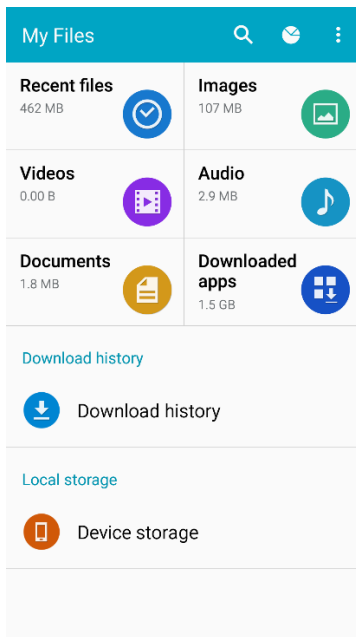

3. Select the “Download” button

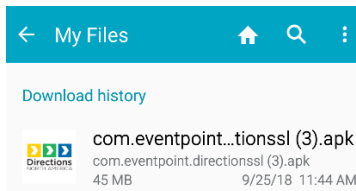

4. Upon seeing notification that file is downloaded, select “Open”

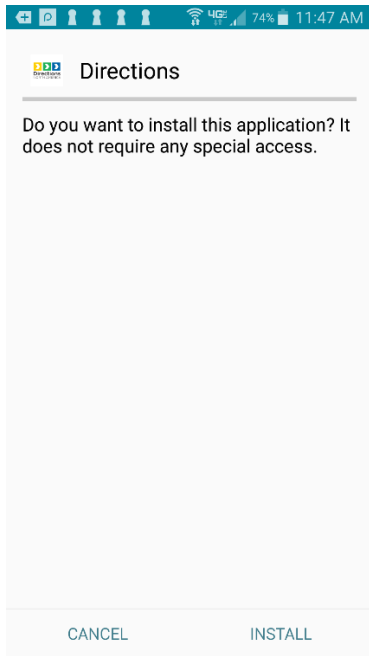

5. If you did not see the above in step 4, navigate to My Files and select Download History

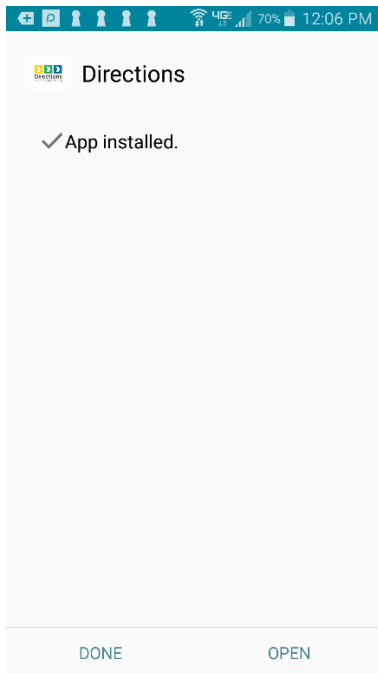

6. Select “com.eventpoint.directionssl.apk” at the top

7. Select “Install”

## 8. Select "Open"

The app is now available on your device to use as it would be if you downloaded it from the Google Play store.
